## Professional Summary

Frontend Engineer with 7 years of experience building high-performance acquisition and conversion platforms in React, Next.js, and TypeScript. Strong focus on web performance, accessibility, and semantic markup, with working knowledge of testing, monitoring, and progressive delivery practices. Comfortable owning features end-to-end — architecture decisions, implementation, and cross-functional collaboration with designers and product managers — within fast-moving Growth teams.

## Experience

### Frontend Engineer

*CookUnity — Growth Team (First Impression) · 07/2018 – 10/2025*

Member of the team responsible for the company's acquisition funnel — homepage, landing pages, and onboarding flows. Owned frontend development across the platform, from component-level implementation to architectural decisions, working closely with designers, product managers, and backend engineers.

- **Next.js migration:** Migrated the landing page platform from Pages Router to App Router incrementally, route by route, validating performance and functionality on each landing before moving to the next.
- **Promotions system:** Built a centralized promotions engine using React Context and a priority-chain algorithm to manage business logic across hundreds of landing pages, resolving data inconsistencies that had been generating a sustained volume of support tickets.
- **Homepage rebuild:** Rebuilt the company homepage from scratch as part of a full rebranding, including custom tablet-specific layouts, animated components (carousels, accordions), and dynamic content rendering based on user dietary preferences using Unleash feature flags.
- **A/B testing:** Ran multiple A/B test variations on the onboarding funnel using Unleash for feature flagging and Segment for event tracking, iterating based on funnel data to improve conversion.
- **Component library:** Owned key technical decisions for the internal component library — defined MVP scope, adoption strategy, and documentation approach using Storybook and Atomic Design principles — before handing off to the team.
- **TypeScript adoption:** Contributed to the team's migration from JavaScript to TypeScript, incrementally typing existing code as part of ongoing feature work.
- **Testing:** Introduced unit and component testing (Jest, Testing Library) into ongoing feature work, using AI-assisted tooling (Cursor) to accelerate test authoring on critical user flows.
- **Code quality & delivery:** Participated in code reviews using SonarQube, and collaborated on canary deployments with Argo, validating releases incrementally in production before full rollout.
- **Monitoring:** Tracked application health and performance through Datadog dashboards, identifying issues proactively and informing prioritization.
- **CMS & content:** Built and modified content components in Strapi to support marketing and landing page initiatives, without owning the CMS configuration itself.
- **Performance & semantics:** Used semantic HTML and accessibility-conscious markup as a standard practice across all landing pages, with ongoing attention to Core Web Vitals and SEO best practices.

## Skills

**Frontend:** React, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, Styled Components, Storybook

**Testing & Quality:** Jest, Testing Library, SonarQube

**DevOps & Monitoring:** Argo (canary deployments), Datadog, Unleash, Segment

**Performance & Markup:** Core Web Vitals, SEO, Semantic HTML, Accessibility-conscious development

**CMS:** Strapi (content & component configuration)

**Tools:** Git, Figma, Cursor, Jira

**Languages:** Spanish (native), English (Upper-Intermediate, B2)

## Education

**Ada Frontend Development Bootcamp** — Computer Programming, 2017

**UX/UI Design** — Coderhouse, 2021
